Employee monitoring for MacOS

The prototype works on all devices running MacOSX 10.13

Login/logout
All user login/logout events are tracked, both local and remote (including through SSH-connections) user types are tracked

Screenshots
The system takes screenshots at a specified interval or at a change of the active window with logging of the application name and window title.

Activity time in applications
The system tracks user activity time in applications. The collected data is used to build productivity reports with the specified criteria. The data from the reports is correlated with the screenshots taken by time tags. It's possible to quickly drill down from graphs and tables to events.

Clipboard
The system intercepts the content of the clipboard. The administrator views and sorts the intercepted data using various filters.

Key-logger
StaffCop intercepts key-strokes in GUI-sessions of MacOSX.

Free 15-days trial on any number of workstations.
Fast. Deploy a pilot project within a business day.
Easy. It takes minimum efforts to launch StaffCop Enterprise.
Complex. You can evaluate the whole range of tasks being solved.

“Atom Security” LLC. is a Russian developer of the software solutions for information security and employee monitoring. For over 10 years we have been developing software solutions to increase employee efficiency and decrease risks related to internal information threats.
